SUMMARY

Software engineer with 3+ years building backend services, event-driven integrations, and full-stack features in C#/.NET, Python, and React/TypeScript for an airline crew logistics platform serving 6 airline partners. Builds AI agents in production. MS in Computer Science from Georgia Tech.

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, JavaScript, SQL, Java, Go

Backend & Frontend: .NET, ASP.NET Web API, Entity Framework Core, Node.js, React, REST APIs

Data & Messaging: SQL Server, PostgreSQL, data modeling, query tuning, Azure Service Bus, webhooks

Cloud & DevOps: AWS, Azure (Functions, DevOps), Google Cloud, Docker, Terraform, CI/CD, Git, Jira

AI: LLM agents, multi-agent systems, Google ADK, Gemini, Claude API, MCP, GitHub Copilot

EXPERIENCE

Corpay - Software Engineer (Backend, Integrations) Mar 2024 - Present

- Designed and maintained REST APIs and backend services in C#/.NET and Azure Functions, deployed on AWS and Azure with Docker, Terraform, and Azure DevOps CI/CD.
- Built event-driven integrations with 6 airline partners' crew management systems using Azure Service Bus queues and webhooks, processing 5,000+ flight, pairing, and rostering changes per hour in real time.
- Led a SAML SSO redesign for a multi-tenant client base across all 6 airline partners, owning the technical design, implementation, and production rollout.
- Developed full websites and reusable components in React/TypeScript, plus a Node.js internal tools site used to operate and support the platform.
- Built Copilot-based agents backed by an MCP server over the codebase and internal documentation, cutting client testing debug turnaround from 48 hours to under 10 minutes.
- Resolved production incidents across partner integrations through root cause analysis, and added structured logging and monitoring to detect and trace failures faster.

Fuzzy Logic Consulting - Software Engineer (Data Analysis) Apr 2023 - Jan 2024

- Designed scalable Python data pipelines and ETL workflows that improved ingestion throughput and data reliability across multiple client systems.

Georgia Tech - Graduate Research Assistant (Cloud Security) Aug 2019 - Dec 2020

- Implemented an AWS-based data pipeline to analyze global threat activity, including cloud monitoring and scalable analytics workflows.

PROJECTS

Public Health Equity Mobile Care Broker - Google Agents for Impact Hackathon, Atlanta Oct 2026

- Built a multi-agent system with Google ADK and Gemini on Vertex AI that schedules where a mobile health clinic should operate, coordinating planner, equity auditor, and communicator agents through shared state.
- Engineered the BigQuery data layer and the two-pass plan-and-audit loop that checks proposals against equity criteria; deployed on Google Cloud Run.

EDUCATION

Georgia Institute of Technology - MS, Computer Science (Computing Systems) Dec 2022

Relevant coursework: Cloud Computing, Advanced Operating Systems, Design & Analysis of Algorithms

Lahore University of Management Sciences (LUMS) - BS, Computer Science June 2019

Relevant coursework: Deep Learning, Network Security
