SUMMARY

Backend engineer with 3+ years of experience building and owning production systems end-to-end in Python, C#, and Go. At Corpay, designed high-reliability API integrations and services for a platform processing 10,000+ reservations daily, with a strong focus on observability, reliability, and cross-functional ownership. Currently building with the Claude API and exploring agentic developer tooling. MS in Computer Science from Georgia Tech (Computing Systems).

TECHNICAL SKILLS

Languages: Python, Go, C#, .NET, SQL, JavaScript, Bash
Frameworks & Tools: Docker, Kubernetes, Azure DevOps (CI/CD), Terraform, AWS, Azure, Git, GitHub Actions
Infra & Observability: Structured logging, production monitoring, distributed services, artifact APIs, cloud-native environments
AI & Tooling: Claude API, MCP servers, agentic developer tooling, LLM integrations

EXPERIENCE

Software Engineer, Backend, Integrations | Corpay *Mar 2024 - Present*

- Owned and shipped backend features end-to-end across a high-volume platform processing 10,000+ reservations daily, writing design docs, shipping implementations, and following through on production issues until resolved.
- Designed and implemented high-reliability API integrations between external airline systems and internal services, owning API contracts, authentication flows, and data mappings from design through production.
- Implemented structured logging and production monitoring across backend services, cutting mean time to debug production incidents from ~1 day to ~4 hours.
- Built a Python-based security service to enforce PCI DSS compliance across internal systems, eliminating exposure of sensitive payment data at scale.
- Led SAML-based SSO redesign for airline clients across the US, Europe, and Australia, replacing per-partner custom flows with a single configurable implementation.
- Managed CI/CD pipelines via Azure DevOps across 4 services and environments, overseeing build, test, and deployment workflows for production backend systems.

Software Engineer, Data Analysis | Fuzzy Logic Consulting *Apr 2023 - Jan 2024*

- Built secure, scalable Python data pipelines supporting analytics workloads across multiple client systems.
- Designed ETL workflows to improve ingestion throughput, data reliability, and error handling for client data platforms.

Graduate Research Assistant, Cloud Security | Georgia Institute of Technology *Aug 2019 - Dec 2020*

- Built a secure AWS-based data pipeline to analyze global Derusbi APT activity, implementing cloud monitoring, detection logic, and scalable security analytics workflows.

Graduate Teaching Assistant | Georgia Institute of Technology *Jan 2021 - May 2022*

- TA for Information Security (CS 6035) and Computer Networking (CS 3251). Designed and delivered labs on TCP/IP, DNS, cryptography, and malware analysis.

EDUCATION

MS in Computer Science, Computing Systems *Aug 2019 - Dec 2022*
Georgia Institute of Technology
Relevant courses: Computer Networks, Advanced Operating Systems, Secure Computer Systems

BS in Computer Science *Aug 2015 - Jun 2019*
Lahore University of Management Sciences (LUMS)
